

## Access Governance-as-a-Service

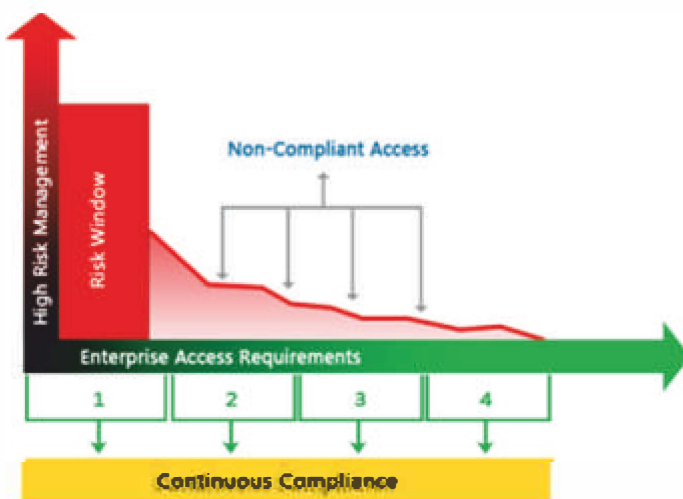

Enterprises across the world are trying to remain focused on core business while minimizing IT investments and overheads. For most of them, governance, risk and compliance initiatives need to be addressed efficiently and cost effectively.

### IdentityVigil

At Happiest Minds, IdentityVigil helps organizations efficiently meet their security, regulatory and business access needs, through a collaborative set of business processes. By automating manual tasks, providing evidence of compliance, reducing access-related business risk, and efficiently delivering business access, enterprises can confidently manage, control, and enforce access to applications and data, across their systems and even the cloud. While it is comparatively simple to manage access systems when the applications are hosted on an enterprise platform, IdentityVigil helps you continue with access management even on the cloud.

IdentityVigil allows enterprises to set roles for individual employees and identifies privileges for each user profile. This kind of system is critical for most enterprises today as it allows them to build a more effective and sustainable compliance program and manages regulatory requirements in the area of identity and access management.

### Why Happiest Minds IdentityVigil?

✓ **Continuous Compliance**

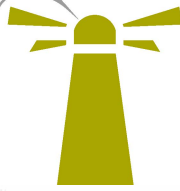

✓ **Simple Configurations with Asset Categorization**

✓ **Faster and Intelligent Governance with Analytics**

## Key Features

### Extensive Analysis of Asset, Access and User

Comprehensive analyses across different dimensions enables informed governance decision-making.

### Access Certification

A platform for performing scheduled, event-driven and ad hoc Access Certification

### Access Change Monitoring

A highly scalable engine that can detect, analyse and notify key access changes across all applications.

### Access Controls

Simple and easy deployment of regulatory and compliance controls

### Access Request and Approval

A highly configurable workflow to manage access request and approval processes

### Access Activity Monitoring

A comprehensive analysis and reporting of what users are doing with access granted to them

## Benefits

- During audit, the IAG solution would allow business owners to access and view the roles and privileges of different departments so that they have a comprehensive view of how the other department functions. This is important as access certification reviews require different departments to audit each other
- Highest level of compliance and regulated access control - Ours is the only solution that supports continuous access governance and not just periodic access governance
- Self-learning governance tool with user profiles and past governance actions to help simplify the governance process
- Analytics driven access governance – most comprehensive analyses of access grant powered by dynamic rule based access and data categorization process
- Business user friendly interface
- Availability of a wide variety of connectors for integration with most of the applications & platforms
