DIGITAL QUERY ASSISTANT

Revolutionizing Brand - Customer Relationships
Customer Satisfaction is the key to success for any business, but more often than not, it is also the pain point for most organizations. With multitude of channels available for customers for interactions with a brand in this digital era, it is even more difficult to assess the effectiveness and the viability. Channels like, face to face communication, telephonic conversation, email, voice mail, text messaging and social media interactions offer varied benefits and experience. However, are these channels competent enough to meet the increasing customer requirements in line with their expectations?

In most of the above channels of customer interactions, clients have to go through a lot of steps to reach the brand if they face an issue with a product / service. This delay in addressing customer concerns often lead to a trust deficit between the customer and brand and will eventually impact the brand reputation. Digital Query Assistant Solution powered by the Managed Content as a Service Platform (mCaaS) from Happiest Minds enables businesses in addressing these challenges and taking it to the next level of customer brand engagement.

Are you experiencing these daunting challenges in the customer service arena of your business?

1. Lack of a unified self-assembling or a self-learning platform/hub
2. Inability to deliver Personalized / Contextualized Knowledge from customer data
3. Time consuming process to find data / relevant knowledge
4. Difficulty in structuring and updating the content repositories due to insufficient resources
5. Lack of knowledge structure or taxonomy with search engines returning too much information
6. No single pane of view of customer data
7. Failure in understanding customer sentiment
Digital Query Assistant (DQA) is a game changer solution powered by artificial intelligence and various areas of cognitive computing, which holds the power to manage and optimize customer interaction across disparate channels including mobile, the web, social media, and voice mail in a manner driven by automation. The DQA solution can sit on top of any existing Call Center or Contact Center solutions, yet delivering the value. The data can be ingested to the platform from any CRM, DAM, ERP, PLM, Ticketing, etc into the DQA platform with deep learning and intelligent search features. When the customer interacts with the brand, the DQA platform can respond in three ways.

**Features of DQA Solution**

- Provide intuitive and contextualized knowledge
